

FLOOD RESILIENCE MEASURES TO DOMESTIC PROPERTIES

“

...both Dan and Ash took pride in what they did and were most helpful in keeping me informed on the work being carried out...”

Mr P Lavis, Resident

The Environment Agency has in place two Frameworks which cover Surveying and Supply & Install of Flood Resistance Measures to Individual Properties. We were awarded a place on both, and have since worked closely with the EA with more than 500 properties receiving the benefit of flood resilience measures.

As part of this framework, we deliver: surveying services, design of bespoke flood resistance solutions on a property by property basis, followed by the supply and installation of any currently available products on the market holding a BSI Kitemark.

This service is delivered using our highly trained and experienced

Project Managers, who work closely with the EA to ensure all requirements are met and each homeowner receives exemplary customer service throughout the process.

Each of our experienced team members have been trained as installation engineers for a wide range of products.

This offers the EA an unparalleled choice of products, ensuring the finished flood resilience solution is a best fit for the homeowner.

Product training is given to every homeowner upon completion of installation to ensure they are able to deploy their products during flood events.
