

CASE STUDY

PROPERTY LEVEL FLOOD RESILIENCE

“

The guys involved were very friendly and clearly knew what they were doing. They are a credit to your company...”

Mr N Robinson, Resident

anglianwater	£180,000	4 year Framework
Client	Value	Duration

To date, we have undertaken eleven Property Level Flood Resilience schemes on behalf of Anglian Water .

Schemes have varied in size and scope, from initial surveying through to supply and installation, all undertaken by our directly employed, specially trained Flood Mitigation Teams.

Each team is led by one of our Lead Flood Mitigation Technicians, ensuring full cooperation and communication between all stakeholders throughout scheme delivery.

Flood Mitigation measures installed include: Whitehouse Flood Doors, Flood Boards, Flood Gates, Waterproof Sealant and

Sump and Pumps.

Every product installed is Kitemarked, with our Flood Door to the current PAS 1188:2014, the only Flood Door on the UK market with this standard.

After the successful installation of products, each homeowner is provided with a post-installation Homeowner Pack, detailing maintenance and deployment instructions for each individual measure.

Our teams ensure following installation, homeowners are comfortable, capable and confident deploying the measures fitted in a timely manner, such that in the event of a flood, their home is fully protected.
