

# SEWER FLOODING MITIGATION FRAMEWORK

“

...Ant and Phil were so polite, courteous and lovely...they did a very good job and left the property clean and tidy...”

Mrs Worth, Resident

£500,000 per annum

4 year Framework

Duration

We were appointed to United Utilities' (UU) Framework for the survey, design, supply and installation of Property Level Flood Resilience to homes across their operating region. We mitigated over 1000 properties for UU using a bespoke range of products for each property.

We provided a 'one stop shop solution', installing a range of measures including: Flood Doors, Flood Boards, Stoplog systems, Airbricks, service entry sealant, brick sealant, NRV's and Sump & Pumps.

In line with United Utilities' requirements, their logo and emergency contact number are permanently displayed on each product, alongside ours;

ensuring homeowners have instant access to assistance should it be required.

In order to cater for the large demand of this framework, we set up a base within United Utilities' Warrington office, collaborating with their project delivery teams efficiently whilst undertaking surveying and installation works.

We employed a number of Surveyors, Project Managers and Installation Operatives within the region; which not only recycled the local pound and provided employment opportunities to local people, but also ensured our customers had access to emergency call out teams with very short response times.
